

This indicator reports on direct, field-based measurements of the ratio of silicon to nitrogen, at representative spatial and temporal scales for the Puget Sound ecosystem. This will enable an understanding of whether Puget Sound has a nutrient balance that supports lipid-rich diatoms all year round, creating the base of the Puget Sound food web.

**Nutrient balance in marine water**

*No reported data available*

## Key Vital Sign Indicator Results

This is a new indicator and we are working with our partners to compile and report data.
